# SKYLINE ENHANCEMENT MODULE

EASILY SET UP MULTIPLE JOBS IN JOB LEDGER

Job Ledger is a powerful tool built into SKYLINE, which is very useful for keeping track of any projects that accumulate costs. But, if you have many jobs, or jobs that are set up frequently each must be set up individually.

Multiple Job Ledger allows you to copy a master Cost Categories List, – in seconds! So a job's categories can be set up with NO additional data entry.

Multiple Job Ledger also allows you to make a change in the master categories list and copy it over to all, or a selection,

of existing jobs. It automatically updates each job with the new cost codes.

The Enhancement Module makes Job Lodger much easier to use for frequent cost accumulation of various jobs, construction or non-construction, even if they are short term and change often. It eliminates much of the manual entry for new jobs and cost code changes. You'll be amazed at the number of valuable uses Job Ledger has, now that it takes only minutes to set up a new job complete with your master list of cost codes.

Multiple Job Ledger is a reasonably priced solution to automatically update the Job Ledger feature in SKYLINE. Many companies are now using Job Ledger to keep track of costs on many projects. Now it's easy and fast to set up a new job or change any number of existing jobs. And, its all done from this fast, Windows program!
